ALL SERVICES

# Product Suite

Peevees Infotech delivers complete business systems that help teams run day-to-day operations with cleaner records, faster actions and accountable reporting.

<b>School Management System</b>	Admission and enrollment records   Attendance with scanner / biometric support   Fee invoices, collections and balances   Academic classes, subjects, exams and teachers
<b>Hotel Management System</b>	Reservation offers and room type management   Room locking during check-in   Check-in, check-out and charge posting   Restaurant, active stays, accounting and GST billing
<b>Human Resource Management</b>	Employee lifecycle and department structure   Attendance, overtime and leave workflows   Payroll runs and salary structures   Training, reporting and accountant modules

## Mobile, Integration and Custom Work

- Native HMS Android and iOS app development using .NET MAUI, connected to the same secure HMS API.
- Custom dashboards, modules, reports and workflows for schools, hotels, HR departments and other business teams.
- API integrations for partner systems, channel managers, biometric attendance, billing and role-based approval.
- Production deployment support for IIS, SQL Server, SSL, environment configuration and release handover.

## Technology Stack

Angular	.NET Web API	SQL Server
JWT Auth	GST Billing	Biometric Attendance
Channel Manager	IIS Hosting	MAUI Apps

## START A ROLLOUT

## What We Can Build Next

Share the platform you want to launch, the users who need access and the server environment you plan to host on. The team can plan the workflow, database, API, UI and deployment path together.

### Discovery

Map roles, workflows, reports, integrations and database boundaries before development starts.

### API First

Use one secure API for multiple UIs where possible, with JWT, CORS and SQL Server migration discipline.

### Role Access

Separate menus and permissions for administrators, staff, accountants and operations users.

### Hosting

Deploy API and Angular sites on IIS or a dedicated server with production configuration and SSL.
